

### EMERCOM Crisis Management Center for Volgograd Region (Russia)

selects Traffic Inspector for online protection and control over site access

#### CASE

Offering timely assistance, saving lives, and protecting the public's health are some of the foremost tasks for any government. Civil defense and emergency prevention require the effective use of information technologies: they are key for quick communications, sharing data, dispatching teams, and learning from and developing methods to handle emergency situations.

Offering timely assistance, saving lives, and protecting the public's health are some of the foremost tasks for any government. Civil defense and emergency prevention require the effective use of information technologies: they are key for quick communications, sharing data, dispatching teams, and learning from and developing methods to handle emergency situations.

#### SITUATION

The Technical Department of the CMC is tasked with setting up and coordinating information exchange and use of information resources, in order to enable timely reaction to emergencies in Volgograd Region. Due to the nature of the CMC, information must be well protected, traffic must be monitored, and employee time must be prioritized.

#### SOLUTION

Since 2006, the CMC for Volgograd Region has used Traffic Inspector, the only software with out-of-the-box flexible administration.

Traffic Inspector helps in several key areas:

- allows flexible configuration of Internet access
- blocks and limits access to risky Internet sites and services
- prevents loading of applications that can harm computer systems
- filters spam (via the spam filter module), which saves employee time spent on emails

The Crisis Management Center for Volgograd Region of the Russian Ministry for Emergency Situations (EMERCOM) was established on February 24, 2005.

Rapid coordination to prevent and react to emergency situations is at the core of what the CMC does. The organization also monitors the status of rapid-response units tasked with warning and informing the public of fires and other emergency situations that are ongoing or forecasted.

says Alexander Yugin, Deputy Chief of the EMERCOM CMC for Volgograd Region

“ The EMERCOM Crisis Management Center for Volgograd Region has been using Traffic Inspector since 2006. It is the only program with such flexible configuration. To Smart-Soft, we say, 'Thank you!' We place our trust in you!
